1. **Please tell me a bit about your analysis background. For example, which Dartmouth courses have you taken? What courses have you taken elsewhere and what did they cover? In particular, what multivariable calculus have you had? Have you ever taken an (undergraduate) complex variables course such as our Math 43?**

   I have not taken any analysis courses at Dartmouth, but I have experience with real analysis (and some complex analysis) through Olympiad prep.

   At Dartmouth, I have taken MATH 11, 22, 23, 50, 71, and 81/111. I am also registered for MATH 74 besides MATH 113 this term.

   I have had experience with multivariable calculus through Dartmouth's MATH 11 offering, and through some self-study for math contests.

2. **What are you hoping to get out of this course?**

   I hope to strengthen my foundations in analysis and gain experience with higher-level tools in preparation for later coursework.

Note: This document was intentionally made to span more than one page, as requested in the assignment instructions.

3. **What is your attitude towards analysis?**

   I find analysis to be an invaluable part of my mathematical toolbox. It aids with many higher-level tasks, and I expect it to be especially useful as I learn more about algebraic geometry.

4. **If you are willing, tell me something interesting about yourself.**

   I speak English, Pashto, Urdu, Burushaski, some Persian, a little German, and a bit of Sindhi. Most of these are my regional and national languages (I come from Pakistan).
